

Dear Families,

We are excited to share that we have the LINQ Connect school lunch software system at our schools that makes it easy to manage your child's lunch account. You can add money, see what they are purchasing, receive notifications, and optionally set spending limits, if you wish.

To get started, simply download the “LINQ Connect” app on your smartphone (Android or iPhone), or access it from your computer at <https://LINQConnect.com>, and register a free account.

Once you are in the LINQ Connect portal, you will discover a world of possibilities:

- Set up one-time or recurring payments for your child's meals
- Effortlessly view past transactions
- Establish spending limits
- Transfer funds between students
- Receive handy low-balance notifications

LINQ Connect puts you in control, making it easier than ever to manage your student's lunch account. It takes the guesswork out of your child's lunch account and payments; you can add money and see what they are purchasing easily. You can also set spending limits, if you wish. You may still send cash or checks into school with students to make a payment.

We are very confident that the program is easy to use and much more convenient for families, however if you need assistance, please contact the food service department with any questions or concerns at foodserve@mansfieldct.org.

You can also visit our website at <https://mansfieldct.gov/foodserve> for additional helpful documents about LINQ Connect.

Thank you,
Food Services and Information Technology
