

Mansfield Middle School

September 27, 2024

Good Afternoon MMS Community,

I write to share an update to a recent communication about water testing that had occurred at MMS on September 13th. We shared that MMS water testing revealed that we had detected total coliform at two locations within the school (e-coli was absent in all samples). The testing caused us to apply a treatment to the whole water system at the school.

I am happy to report that after the water treatment, our testing did not show the detection of total coliform. Students and staff can safely continue to use our regular drinking water. Our maintenance staff will be removing the water filling stations that were brought in during the treatment process.

Thank you and please reach out if you have any questions.

Best,

Larry Barlow
Principal
